EXECUTIVE SUMMARY

Senior Software Engineer in Test with extensive experience validating globally distributed, mission-critical database systems at cloud scale. Combines deep expertise in database internals, SQL execution, and large-scale system validation with AI-assisted testing to improve quality, coverage, and engineering velocity across complex data platforms. Proven track record identifying 4,700+ defects (4,000 resolved; 85% fix rate) across data integrity, concurrency, and performance domains in systems supporting hundreds of millions of users and billions of transactions. Trusted to lead high-severity production investigations, rapidly isolate root causes, and partner cross-functionally to deliver resilient, production-grade systems at scale.

CORE COMPETENCIES

- | | | |
|--------------------------------------|--|---------------------------------|
| ▪ Database Testing & QA | ▪ SQL Testing & Optimization | ▪ Database Driver Development |
| ▪ Automated Test Framework Design | ▪ Data Integrity Verification | ▪ Data Analysis & Visualization |
| ▪ Stress, Load & Performance Testing | ▪ AI-Assisted Testing (Codex, Claude Code) | ▪ Cloud Infrastructure (AWS) |
| ▪ Detection & Root Cause Analysis | ▪ Customer Escalation Resolution | ▪ Technical Mentorship |

PROFESSIONAL EXPERIENCE

ORACLE AMERICA | Redwood Shores, CA

1998 – 2026

Consulting Member of Technical Staff

Key Accomplishments

- **Defect Detection:** Identified 4,700+ backend defects (4,000 resolved; 85% fix rate), improving system stability and protecting multimillion-dollar enterprise workloads supporting hundreds of millions of users.
- **Performance, Stress & Load:** Developed a distributed load and performance tool running on AWS using SQS/SNS, ECR, and ECS (Elastic Container Service). Designed and built enterprise-scale stress and performance testing framework simulating thousands of concurrent users and millions of transactions, reducing release risk for mission-critical systems.
- **SQL:** Optimized SQL performance for OLTP and OLAP workloads resulting in orders of magnitude performance improvements. Architected SQL fuzz testing system generating 10,000s of queries per run across multiple database engines, uncovering critical issues including crashes, incorrect results, and data corruption.
- **AI:** Leveraged AI-assisted testing (Codex, Claude Code) to accelerate test development by 30–50% and significantly expand test coverage across complex distributed systems.
- **Distributed Systems:** Validated fault-tolerance for a distributed database verifying automatic client failover under node loss. Detected multi-node transaction problems that led to a 10x performance improvement.
- **Analytics:** Built monitoring dashboards and analytics solutions using Prometheus, Grafana, and R to analyze system behavior across large-scale workloads.

- **Production Incidents:** Led investigation and resolution of high-severity production incidents, reducing mean time to resolution (MTTR) and minimizing customer impact in global production environments.
- **Database Drivers:** Developed high-performance database drivers (Java, C, C#, R) and enhanced JDBC batch performance, improving throughput for high-volume transactional workloads.
- **Database Performance:** Improved in-memory database engine performance, reducing latency in critical execution paths and increasing system efficiency under load.
- **Mentorship:** Led a small engineering team, transferring knowledge on stress, load, performance, and AI assisted testing.

BRODERBUND SOFTWARE | Novato, CA

1996 – 1998

Quality Assurance Engineer

- **Web Applications:** Built automated multi-user e-commerce load simulations replicating real-world traffic patterns, identifying scalability bottlenecks, and improving system stability.
- **Leadership:** Managed a small QA team, improving defect detection efficiency and test coverage for early e-commerce platforms.

EDUCATION

Bachelor of Arts, Business Economics — University of California, Santa Cruz

TECHNICAL SKILLS

Languages: Java, C, C#, Python, R, SQL, PL/SQL, Perl, Shell Scripting

Databases & APIs: Oracle RDBMS, Oracle TimesTen, ODBC, JDBC, ADO.NET, OCI

Cloud & Containers: AWS (Certified Cloud Practitioner), Docker, AWS ECS, ECR, SQS/SNS

Testing: NUnit, JUnit, Apache JMeter

Data Analysis & Visualization: Prometheus, Grafana, R (ggplot, dplyr, tidyverse, RStudio, Shiny Server)

ORM Frameworks: Hibernate, EclipseLink, JPA

Application Servers: Apache Tomcat, WebLogic, JBoss, WebSphere, GlassFish

Development Tools: Git/GitHub, Maven, Make, Visual Studio Code, Eclipse IDE, Linux, Windows
